

EZ Way, Inc.

OPTIONAL FEATURES FOR HEALTHCARE BATHING SYSTEMS

Rane Healthcare Bathing Systems come standard with an easy-to-use control panel, thermostatic mixing valve with anti-scald protection, handheld shower wand for upper body washing, built-in disinfection system to minimize the risk of infection, analog thermometer for monitoring tub-fill water temperature, and 3/4" stainless steel supply lines. There are also several optional features available to enhance the bathing experience:

- CleanRane™ Air Spa System
- Right or Left Hinge Door (RG9 and RJ15)
- Front, Side, or Island Plumbing Configuration (RR7-II)
- Battery Backup (RR7-II)
- AutoFill (RR7-II and RS8)
- Gelcoat color choices of Cool Gray or Sky Blue

CleanRane™ Air Spa System

The CleanRane™ Air Spa System enhances the therapeutic and relaxing effects of bathing, providing a pleasant experience for the resident. Hydromassage provides millions of preheated air bubbles in the water, increasing stimulation of peripheral blood circulation, reducing pain and inflammation in the joints, gently massaging away dirt and inducing deeper relaxation.

The CleanRane™ Air-Spa System features spring loaded check valves with back flow prevention, eliminating the extra step to disinfect or flush the air lines. This provides the highest level of protection against contaminants and bacteria. When the system is turned off, the spring loaded check valves shut immediately, therefore, no water or debris can enter the air-spa lines. Simply disinfect the surface of the tub and air-spa jets, which kills the bacteria and contaminants.

Quietness – Built-in silencer

Ceramic Heater – preheats air before it is injected into the tub. Maintains water temperature in tub

Memory – The built-in electronic controls give more range of options like limitless speed variation and pulsating cycles.

Performance – produces a volume of air that allows for limitless speed variation and the use of more jets.

Tranquility – Rubber mounts are designed to absorb 95% of the motor vibration.

SPRING LOADED CHECK VALVE

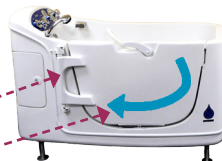

AIR SPA JET

Door Configuration

The RG9 Victoria and RJ15 Caribbean are both side-entry bathing systems, accessible through a swinging door located on the side of the tub. These bathing systems have the option of a left hand or right hand door swing. The plumbing package of the bathtub always follows the door hinge (or hand). You must consider the layout of your bathroom and toilet setup, when choosing between left-hand or right hand door.

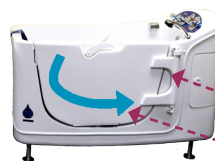

LEFT-HAND

Door hinge is on the left
Door swings out to the left
Door is on the bather's left side (when sitting in the tub)

RIGHT HAND

Door hinge is on the right
Door swings out to the right
Door is on the bather's right side (when sitting in the tub)

“Your Total Patient Lift Solution”

Plumbing Configuration

The RR7-II Atlantic is available front, side, or island plumbing configurations. The optional configurations allow the bathing system to be seamlessly integrated into the layout of your bathing area.

Front Configuration

Plumbing hookups are at the end of the tub where the control panel is located.

Side Configuration

Plumbing hookups are on the side of the tub opposite of the door.

Island Configuration

Allows for 360° unobstructed access for the caregiver, with no visible hoses or cords. (The plumbing hookups are under the tub.)

Battery Backup

The RR7-II Atlantic has optional battery backup. This enables use of the tilting function in the event of a power outage. (This is a standard feature on the Height Adjustable model of the RS8 Geneva.)

AutoFill

AutoFill is a timesaving feature available on the RR7-II Atlantic and the RS8 Geneva allowing caregivers to fill the tub to a preset level while completing other tasks or collecting the resident. A push of a button fills the tub to a preset level (24 gallons for the RR7-II and 64 gallons for the RS8 models), eliminating waiting/observation time.

Gelcoat Color Options

Our Healthcare Facility Bathing Systems are also available in the finishes of Cool Gray or Sky Blue.

Rane Disinfectant Solution

Rane's lemon-scented disinfectant is effective against H1N1 Influenza A virus, TB, MRSA, Hepatitis B/C, VISA, VRE, HIV-1, and pathogenic fungi. The concentrated solution disinfects and cleans at a dilution ratio of 2 oz. of disinfectant solution to 1-gallon of water. Rane Disinfectant Solution is available in four one-gallon bottles per case.

EZ Way is proud to be a US manufacturer of Safe Patient Handling products
