BRIDGEROLLER™

Safely transfer patients from one surface to another in seconds

The **BridgeRoller™** is a lightweight, foldable, patient transfer device which aides in the transfer of patients between a variety of surfaces. It is essentially a patient transfer board and a padded slide tube in one.

Lightweight and easy to use, the BridgeRoller's foam core provides maximum patient comfort. Its unique design reduces the risk of injury by minimizing caregiver effort associated with a lateral transfer move.

An anti-bacterial cover and easy to wipe down surface makes disinfecting the BridgeRoller™ between patients simple and safe between patients.

FEATURES

- Lightweight - weighs only 6lbs
